

# Electricity Oversight Board

Daily Report for Wednesday, March 3, 2004

The average zonal price dropped by 46 percent for SP15 to \$29.69/MWh down from \$54.76/MWh and dropped by 19 percent for NP15 to \$28.55/MWh down from \$35.46/MWh. Despite high generation outage levels that ranged between 10,000 MW and 10,700 MW, the lower average zonal prices could have resulted from:

- Reduced hours of congestion on Path 26 in the north-to-south direction. Although congestion persisted on Wednesday, NP15 and SP15 experienced only 2 hours of split zonal prices between 5 a.m. and 6 p.m.
- Moderate weather conditions. Temperatures increased across California between 2 and 9 degrees and ranged in the mid-60s.
- Lower natural gas price. The average natural gas price decreased by less than 1 percent to \$5.26/MMBtu down from \$5.28/MMBtu on Tuesday.

The price spike of \$58.40/MWh at 10 p.m. could have occurred as a result of the winter peak load (evening hours) that concurs with the periods which generators with long-term contracts typically ramp down. To balance the loads with resources in the real-time sometimes requires acceptance of all bids that could imply higher priced bids as well.

In an effort to mitigate intra-zonal congestion, the CAISO requested decremental energy bids for Victorville-Lugo between 8 a.m. and 5 pm.
